

THE ARIZONA SILVER BELT

OFFICIAL PAPER OF GILA COUNTY.

Saturday, March 20, 1886.

There is great activity in the South African gold mines.

The people of the United States eat ten billions of eggs every year.

A "right whale" which yielded \$4000 worth of oil and bone, was captured recently at San Diego, Cal.

At the Cape of Good Hope Scotch shepherd dogs are used in herding ostriches, and perform the work with sagacity.

A Hindoo loan complete is worth sixty-eight cents, and weavers shawls, silks and muslins, which our most expensive apparatus cannot equal.

A chest containing Spanish money to the value of \$3,960 was ploughed up in Putnam county, Fla., the other day. Some of the coins date back to 1673.

In a grand rabbit hunt near Beiser, Lassen County, California, recently fifty-three guns were in use and 1717 rabbits was the score for the day's sport.

A sewing machine which is held in the hand and worked like a pair of scissars" is made at Bridgeport, Conn., the factory employing seventy-five people.

The largest population in Ireland was at the census in 1841, when it reached 8,175,124; at the census in 1851 it fell to 7,764,104 and now it is 5,174,866.

A bark upon the farm of Mitchell Hooper, at Bridgewater, Mass., has remained as the monument of the overflow of the Taunton river, in 1780. The flood last week reached exactly the same point.

Justice Bogardus, of Wallace, writes that he has just tried a case in his court under the laws of King Philip II, of Spain, which are in full force and effect in this Territory.—Albuquerque Journal.

A man in Marcellus, Mich., whose divorced wife had been awarded the custody of their two children, has purchased the latter from her for \$1,500 each, an other method of securing their custody having failed him.

Dr. G. L. Fitch, who has been for five years in charge of Kukanku Indian hospital in Honolulu, thinks that in fifteen years there will be only enough natives left to make curiosities. Indians and leprosy are killing them off.

It may be interesting to know that at Lake Nyansa, Africa, a strong young man can be bought for forty yards of white cotton cloth, a young woman for fifty-six yards and a young mother for thirty-six yards. Age is evidently at a discount, for an old man cannot be bought for four yards.

By the death of Senator John F. Miller, of California, the Democrats will gain a temporary seat in the United States Senate. The legislature is not in session, and Gov. Stoenman, who is a Democrat, will appoint a Democrat to the vacancy. The new legislature to choose a Senator will be elected this fall.

Despite the fact that the proprietors of the gaming tables at Monte Carlo have odds in their favor, the public won recently in seven days a balance of \$600,000. The run of ill-luck was commented on in the French papers, and gamblers flocked to the tables, there being as many as 600 playing in the rooms on a single night.

A Berlin disputant says: All workers of foreign birth have been discharged from employment in the government dockyards. This action has been taken because of the disclosures in the case of Capt. Sarawak, recently convicted of having sold plans and information of German fortifications to the French.

Reformation is a work of time. A national taste, however wrong it may be, cannot be totally changed at once; we must yield a little to the prepossession which has taken hold of the mind, and we may then bring people to adopt what would offend them, if endeavored to be introduced by violence.

A fund has been started for a monument to John B. Geoghegan. This again reminds us that the country is breaking out with a perfect smallpox of monuments, which get no further than pedestal, and then stick and stop. Why not exhaust the Treasury surplus with an appropriation to do up this whole monument business in one grand sweep, and be done with it?

Siberia has been for some years turning out an annual product of from \$25,000,000 to \$30,000,000 from the gold mines of the Ural and the district about the headwaters of the Yenisei and Amoor, in the Altai range, and recently the Russians have been repulsed by the Chinese in an attempt to push their prospecting southward into Mongolian territory.

WHAT VASSAR GIRLS EAT.

An Estimate of the Comparative Intellectual Value of Various Foods.
[New York Commercial Advertiser.]

In this scientific age, when all activity, whether physical or intellectual, is understood to be an expenditure of force, and force in human beings is known to have its origin in food assimilation, the substance report of Vassar girls is a document worthy of philosophical study. We know that every "sweet girl" graduate's diploma has been won by the conversion of food into brain activity; that every time a Vassar girl gets a lesson or turns aside, or even busies, a moment of time, the amount of it is measurable quantity of aliment.

Let us see, therefore, what it is that Vassar girls eat, in order that we may have some data upon which to estimate the comparative intellectual value of different articles of diet. The account of the year's provider reveals some curious and interesting facts. Assuming as every Vassar graduate will insist that we shall assume—that there are no intellects so perfectly "in condition" as those at Vassar, we must believe that the ratio established between chocolate eclairs and stale pencils on the one hand and roast beef on the other, is the right ratio for the maintenance of the feminine mind in its highest state of efficiency.

Unluckily, the account rendered by the Vassar purveyor does not enter into exact details, but it is at any rate sufficiently particular to be suggestive. We learn, for example, that while the Vassar girls ate only 14,000 pounds of butter, they made away with 22,000 pounds of sugar, a fact from which it is a necessary inference that sugar is a more intellectual article of diet than butter in the ratio of twenty-two to fourteen. Ordinary folk eat more butter than sugar, which is obviously wrong, and if we mean to cultivate the mind properly we must straightway amend our manners in this respect. Thackeray discovered the fact long ago and insisted that sweets and novelties are to be condemned because all women crave them, but he did not get at the root of the matter.

A sewing machine which is held in the hand and worked like a pair of scissars" is made at Bridgeport, Conn., the factory employing seventy-five people.

The largest population in Ireland was at the census in 1841, when it reached 8,175,124; at the census in 1851 it fell to 7,764,104 and now it is 5,174,866.

A bark upon the farm of Mitchell Hooper, at Bridgewater, Mass., has remained as the monument of the overflow of the Taunton river, in 1780. The flood last week reached exactly the same point.

Another interesting fact is that the Vassar girls eat forty bushels of onions during the year. We are pleased to know this. The onion is a vegetable of many sterling qualities, which is too much neglected by women under a mistaken notion that its consumption is vulgar. It is dainty and succulent, and its food value is very great. If it dismally affects the breath, that is no reason for neglecting it, but merely a reason for temporary seclusion on the part of the consumer, and, as everybody knows, seclusion is always a bad omen.

Besides these things, the girls made use of 40,000 clams—cooked, let us hope—2,300 pounds of turkey, 2,895 pounds of fresh fish (brain food), seven barrels of mackerel, 91,485 pounds of fresh meat, and twelve gallons of horseradish, in addition to other articles of minor importance. Obviously, the girls live well as they ought, seeing that they do their work well. We wish them every happiness and all prosperity, and good husbands, every bachelor (of arts) of them.

Following the "Natural Bent."

[Solaro News.]

Mr. E. R. SHI begins an article in The Atlantic Monthly entitled "Should the College Educate?" by impressing the reader with the distinction between a college, which is designed to "educate the man"—to round out that totality of qualities which is called character—and a university, which is designed to prepare the man for some special field of labor. He then turns attention to the question of permitting the college pupil to follow his own "natural bent" in the matter of selecting lines of study, and says that in choosing a course of study at a university the choice should be made according to the pupil's taste and talent, but that "to choose on that ground alone in his preparatory culture would simply qualify him to do nothing but killrope."

The purpose of the college is to do for the mind what the gymnasium does for the body—"to build up the man all round"—and it would be unwise to advise the youth at the gymnasium to devote himself to those exercises in which he naturally excelled, to the neglect of all that found out his weak points. Hence Mr. Shi argues that if the student "hates mathematics" that is the very study he probably most needs, since his hatred presumably arises from the fact that his mind is naturally weak on the side of abstract reasoning and stands most in need of repair at that point.

Looking at the "bent" from the "other side," Mr. Shi finds that it is so far from being an indication of the degree of Previdence as to be a predisposition to weakness in some particular directions; or, as he aptly puts it, "a bent away from certain lines of study." Mr. Shi might have clinched his argument still tighter by applying the best-following principle to very young children. If the infant were permitted to follow his own bent he would, except perhaps in rare cases, become a savage.

An Item for the Weather Clerk.

A Scotch gentleman of keen observation has found out that the Atlantic tides serve the purposes of natural storm warning with a remarkable degree of reliability. Writing to Symons' Meteorological Magazine he states that in the Hebrides "the waters of the Atlantic rise abnormally high for forty-eight hours and downward before the arrival of a cyclone, the height and time-period varying with the force of the approaching disturbance."

He therefore suggests that if the daily record of the tides were faithfully kept and reported they would afford data for forecasting storms with greater certainty than pedestals, and then stick and stop. Why not exhaust the Treasury surplus with an appropriation to do up this whole monument business in one grand sweep, and be done with it?

Siberia has been for some years turning out an annual product of from \$25,000,000 to \$30,000,000 from the gold mines of the Ural and the district about the headwaters of the Yenisei and Amoor, in the Altai range, and recently the Russians have been repulsed by the Chinese in an attempt to push their prospecting southward into Mongolian territory.

An eminent physician thinks that men should not run after they reach 40.

Horses rest best when the temperature is 80 degrees.

St. Louis Brewery! Chas. Banker, Proprietor.

Always keeps on hand and is prepared to furnish

The Best Kind of Beer,
Ever made in Globe. Brewed by Hahn, the
Bavarian brewer.

Give it a Trial.

[July 23-24]

D. HENDERSON, BANKER.

TUCSON. - - - - Arizona.

Will transmit a

General Banking Business,

IN ALL OF ITS BRANCHES.

Will receive & deposits on open account subject to sight checks.

Will issue Certificates of Deposit repayable on demand.

Collections made on all points at Lowest Rate of Exchange.

Will draw Sterling demand bills at customary issuance on the Anglo-California Bank (Limited), London, England.

Refer by special permission to Anglo-California Bank and to J. & W. Seligman & Co., New York.

CORESPONDENTS:

ANGLO-CALIFORNIA BANK (Limited), San Francisco, California.

J. & W. SELIGMAN & CO., New York.

ANGLO-CALIFORNIA BANK (Limited), London, England.

MERCHANTS LOAN & TRUST CO., Chicago, BANK OF COMMERCE, St. Louis.

MASSACHUSETTS NATIONAL BANK, Boston.

LOS ANGELES COUNTY BANK, Los Angeles.

KALE & LEWIS, Phoenix, A. T.

BANK OF ARIZONA, Prescott, A. T.

Notice of Forfeiture.

To the legal representatives of Andrew St. John, deceased, and J. B. Nichols, or whom it may concern, this is to notify you that I, a co-owner in the Chaldean mining claim situated in the Territory of Arizona, County of Gila, in the Gila District, have done and performed all the acts required by law and required by law for the year 1885. This claim is my private property. Private claims of Arizona within St. Louis have expressed their convictions that it is peculiarly adapted to the wants of this Territory, and needs only a trial to insure its speedy introduction.

Orders addressed to THE WEST INDIA MANUFACTURING COMPANY will be promptly executed.

It is endorsed by the best chemists as the most efficacious, strengthening Tonic this country has ever produced, the value of which will be determined by the following:

Private claims of Arizona within St. Louis have expressed their convictions that it is peculiarly adapted to the wants of this Territory, and needs only a trial to insure its speedy introduction.

It is endorsed by the best chemists as the most efficacious, strengthening Tonic this country has ever produced, the value of which will be determined by the following:
